(a)
population $s_{nuc} - s_{col}$
nucleation $s_{nuc}$
$D = 0.2J,\ 0.4J$
$y = x$
$0.85x$
colour: $k_BT/J = 0.45 \ldots 0.60$
measured slope
weak-damping prediction
(b)
$F_{pop}$ (stationary measure)
$F_{nuc}$ (rate)
measured / predicted
band: mean $F_{pop} = 0.85 \pm 0.08$
$k_BT/J$
(c)
$\Delta\langle M\rangle_T = k_BT\,\partial \ln n_0/\partial B$
not dilute ($k_BT = 0.7J$)
magnetization deficit
$T = 0$ skyrmion: $\Delta M_0 = -67.7$
$k_BT/J$
