(a)
residual at $\beta = \alpha$
$s_{\rm nuc} = d\ln\Gamma_{\rm nuc}/d\omega$
$s_{\rm rot} + k(\beta-\alpha)/\alpha$
$\alpha = 0.1$
$\alpha = 0.3$
uniform u ($\omega = 0$)
no drive
$(\beta-\alpha)/\alpha$
(b)
$s_{\rm nuc}$
shear
$-\Omega\hat{z}\times$
$+\Omega\hat{z}\times$
$\beta = \alpha$
$u = 0$
$u = 0$
(c)
$\propto 1/\alpha$
prediction
$s_{\rm nuc}$
rotation only
shear, $\beta = \alpha$
$\alpha = \beta$
(d)
$s_{\rm nuc}$ ($\beta = 0$)
ψ amplitude ×16
from $L = 32$ to 128
L/a (fixed ω)
